

Bank Connections

Last updated: April 25, 2022

Create a connection to a Bank SFTP Server

Connections to banks can be created using the **Register New Entity** wizard, accessible from the Navigation Menu.

Click **next** on the first page of the Wizard

Select Service Type

Select what type of organisation you are connecting to.

Click **next**

Select Geographic Region

Select the location of the organisation

Click **next**

Select Financial Institution

Various different types of connections are supported. The following wizard pages will be customised to the type of connection you select.

Generic SFTP (Advanced): SSH File Transfer Protocol

Generic SFTP (Advanced)

Description: Descriptive text for this connection

SFTP Server URL: IP address or URL of the Bank's SFTP Server

Port Number: TCPIP Port for the SFTP Server

SFTP Authentication Type: How you log into the Bank's SFTP Server, select from

- **User & Password:** You must then fill in the SFTP User Name and SFTP Password fields
- **User & Private Key:** You must then fill in SFTP User Name and SFTP Private Key fields
- **User & Password & Private Key:** You must then fill in SFTP User Name, SFTP Password and SFTP Private Key fields

SFTP User Name: Login or User name provided by the Bank for your connection to the SFTP Server.

SFTP Password: Password provided by the Bank for your connection to the SFTP Server.

SFTP Private Key: If you have selected to use a Public/Private key combination to authenticate with the SFTP Server. You must generate the Public/Private key files, send the Bank the public part in a file. In these fields select the format of the key file, use the 'Choose File' button to upload the PRIVATE KEY file, and provide the password for the key file.

Remote Dir: The location on the Bank's SFTP server where uploaded files will be places

File Format: This is the format (Type) of file that your bank provides you Statement data in

Your bank should provide documentation about the available formats.
