Designing Documents (Purchase Orders, Picking Notes and Requests)

Last updated: September 5, 2022

All the documents are SQL Reporting report definition files, they can be edited with Visual Studio 2010. The Visual Studio installed as part of SQL Server can also be used.
Just open the RDLC file in VS and edit the report.
NOTE: The version of the report file should not be updated, if you update the file version eRequest may not be able to run the report.
