Update Script Permissions

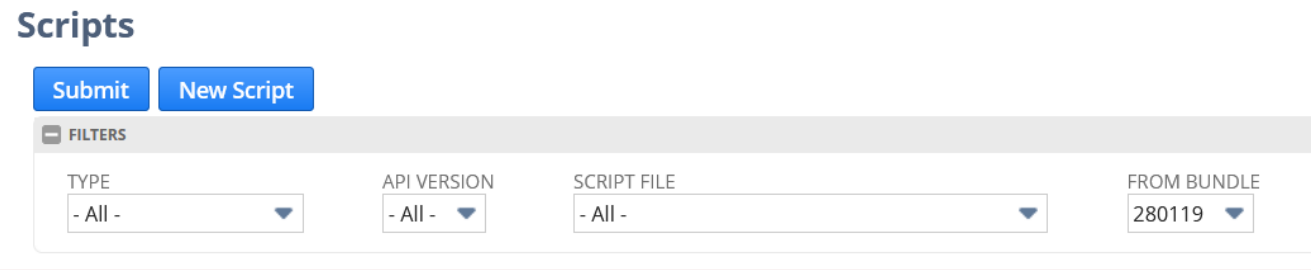

Last updated: July 25, 2022

Now that you have installed the correct Nolan bundles and configured ABR to your liking, you will need to **Update** the following **Script Deployments** so that they are available to **All Roles**. Standard NetSuite **Permission** options will control which users can access these scripts.

First, go to **Customisation -> Scripting -> Scripts**.

Then, set the **Filter Type** from **All** to **280119**.

Now select **View** beside the **ABR Account Refresh** script.

This will open a new screen where you will click **Deployments**.

Now select the **ABR Account Refresh** link.

This will open a screen containing further information about the **Script**. Here you will **Change** the **User Permissions**.

Under the **Audience** tab, select the **All Roles** box.

Now click **Save**.

Now **Repeat** the above steps for the following **Scripts**:

ABR Account Summary

ABR Configuration UE

ABR Create Journals Client

ABR Create Journals Event

ABR Create Journals Suitelet

ABR Journal Warning

ABR Reconcile Steps
