Bundles Install

Last updated: December 6, 2022

There are two bundles that need to be installed in order for eInteract to work.

Nolan eInteract for NetSuite Bundle

The bundle is listed in the SuiteBundle Repository as “Nolan eInteract for NetSuite”, bundle id 157198.

Install the bundle, accepting the defaults. The bundle components list shows the bundle contents; this list is also available in the Technical Reference document.

Registration Bundle

The Onetrail.net Integration is protected by our Registration Keys system, so the “Product Registration (Nolans)” bundle (id 157159) must also be installed. This is listed in the repository and is publicly available.

Once the registration bundle is installed, navigate to Setup, Custom, NC Product Registration to enter your registration key. You should request your registration keys from the Admin team at NBS, who will be able to create them for you. Please note that if the customer has a Sandbox, you will need a separate key for the sandbox.
