ABR Nolan Bank Feeds - Manual Process

The **ABR Bank Feeds** Processes (**Auto Match**, **Auto Gen**, **Download**, **Extract**, **Auto-Import**) can all be manually started for each reconcile account, Via the **Nolan Bank Feeds Download**, **reconcile** and **reconcile wizard** screens.

On the **ABR Bank Feeds** Screen, there is a sub-list containing every setup **reconciliation** account. You can select, unselect, and change the dates for specific **reconciliation** accounts. At the top of the page is a multi-select field called “task to perform” Every task selected from this field will be performed on the selected accounts. The date fields located next to it will set the same start and/or end dates for every account.

When the “perform tasks” button is pressed, you will be transferred to a process status screen, and a **process instance** is created. Each selected process will run for each selected account, with the start and end dates set for those accounts.
